Feedback

I had the pleasure of supervising Alexandre during his 6-month end-of-studies internship in the Research & Development team at Thales SIX GTS France. He worked on a highly strategic subject: the design and implementation of a hybrid system for generating military Courses of Action (COA) using Large Language Models in critical contexts. This is his second internship with me — he had already impressed us during his 4th-year internship on the NCOP system.

Overall Assessment

Exceptional performance.

Alexandre is one of the most autonomous, rigorous, and effective interns I have supervised. He quickly took full ownership of a complex, ambitious subject that combined systems architecture, symbolic AI, doctrinal modeling, and responsible AI principles. He delivered a high-quality prototype and a remarkably mature scientific report (two parts: professional + scientific), far exceeding typical internship expectations.

Key Strengths

- Technical excellence and innovation: He designed and iteratively built a determinism-first hybrid architecture that intelligently combines deterministic rules, optimization (GOAP, CPM/CP-SAT), and constrained LLM usage. The system is robust, auditable, and respects the strict constraints of defense-critical environments. His ability to move from comparative analysis to concrete implementation was impressive.
- Autonomy and project ownership: Alexandre worked with remarkable independence while maintaining excellent alignment with objectives. He imposed a professional, documentation-first process on himself, conducted regular self-reviews, and proactively involved operational experts (officers) to validate tactical plausibility. He identified challenges early, adapted his roadmap, and delivered honest, measured results — including openly reporting efficiency weaknesses rather than glossing over them.

Recommendation

Strongly recommended for internal positions, particularly in AI R&D, decision-support systems, command-and-control (C2), or any role requiring high technical autonomy, systems thinking, and a strong sense of responsibility in critical contexts. Alexandre has the profile of a high-potential engineer who can quickly take on significant responsibilities at Thales.

I would be very happy to welcome him again in the team on a permanent basis.
